*The 3349 is an air-hydraulic hole punching machine.* Its design offers the possibility to work powerfully and with a fast stroke. The hole punching is burr-free. The 3349 is used for punching drainage holes in the floor rail when glazing terraces and balconies. The tool is available with a punch size of 7 x 7 or 7 x 12 mm.

The tool is lightweight and well-balanced to put as little strain as possible on the user. The air hydraulics ensure quiet and vibration-free operation. The tool has only a few moving parts and is therefore very reliable in operation.
